

OFFICIAL PROJECT MEMORANDUM & APPROVAL DECREE

TOKEN IDENTIFIER: \$RABBID (SOLANA BLOCKCHAIN NETWORK)

Document Type:	Official Protocol & IP Assignment	Effective Date:	September 23, 2026
Project Origin:	Pump.fun Token Launchpad	Current Status:	ATH Holding / 1% Bonding Curve
Lead Developer:	RABBID_Dev (Autonomous Identity)	Security Verification:	DEV - DP: Verified (No Dump Risk)

1. INTELLECTUAL PROPERTY & COPYRIGHT ASSIGNMENT

This document officially declares that the smart contract deployment under the identifier **\$RABBID** (Contract Address: FN2wcfXmZ14ukg8GQ4h8PDTy3WrCz5rdvygnkcoCpump) is inspired by and references the pop-culture narrative of Raving Rabbids. All rights, graphic assets, community lore, and marketing visuals generated by the Lead Developer are protected under the decentralized copyright protocol of the Solana network. The visual assets, including the custom branded variations (e.g., 'Socrates-Rabbid' and 'Drake-Rabbid' implementations), are the exclusive property of the project's autonomous marketing bureau.

2. DEVELOPMENT STATUS & SMART CONTRACT ARCHITECTURE

The smart contract has been autonomously deployed via the Pump.fun platform. As of the current date, the token architecture has established a 3-day history of stability, maintaining its historic maximum market capitalization at **\$3.29K - \$3.30K MC**. The bonding curve logic is active at 1%. The smart contract operates under absolute immutable consensus; no modifications to supply, tokenomics, or liquidity mechanisms can be executed by any third party. The Lead Developer's position is verified transparently via public on-chain ledger records.

3. MARKETING AGREEMENT & AUTOMATION PROTOCOLS

Global expansion protocols are officially approved as of September 23, 2026. The marketing structure is split into two active sectors: (a) Digital Shilling Syndicates via automated distribution nodes (utilizing advanced bot architecture to maintain a 30-minute interval presence in major trading channels), and (b) Physical Guerrilla Marketing operations (IRL), including high-visibility vector QR-code deployments on wearable items. The marketing framework is fully organic, anti-malicious, and independent of foreign multi-account sybil clusters.

4. APPROVAL SIGNATURES & VALIDATION DECREE

By publishing this document to the official project ecosystem, the Lead Developer and the core backing infrastructure approve the full rollout of Phase 2 operations. Any unauthorized intervention, phishing attempts, or social engineering targeting the core administration will be immediately mitigated by internal network defense parameters.
